

ENVIRONMENTAL POLICY

Extract from the Environmental Management Manual

A TLC top management, realizing the fundamental importance of a responsible and proactive behavior towards the ecological issues, intends to implement and maintain an Environmental Management System based on the following key points:

1. LEGAL COMPLIANCE

To guarantee the compliance with the environmental laws and regulations applicable to corporate processes, products and services.

2. MINIMIZATION OF ENVIRONMENTAL IMPACTS AND POLLUTION PREVENTION

To minimize all significant environmental impacts due to corporate products and activities, aiming at pollution prevention.

3. PRODUCTS ECO-EFFICIENCY

To pursue the ecological excellence of products together with the quality excellence, including “design for environment” specifications in R&D procedures, in order to develop products characterized by reduced environmental impacts and safe for the users.

4. WASTE MANAGEMENT

To manage in the most possible efficient way the industrial waste, promoting the separation and privileging the reuse and recycling of materials with respect to disposal at the end of their life cycle.

5. PERSONNEL INVOLVMENT

To make the personnel aware of the environmental issues.

6. MANUTENZIONE IMPIANTI

To ensure a suitable maintenance of plant systems and other relevant equipment for health and safety, both for the personnel and the surrounding territory.

7. CONSUMPTION REDUCTION

To keep under control resource consumption, with reference to energy, water and materials.

8. PERFORMANCE MONITORING

To monitor the environmental performances, using suitable key indicators.

9. SUPPLIERS INVOLVMENT

To involve the corporate subcontractors in the common commitment towards the continual improvement of the general environmental performance.
