

INTEGRATED COMPANY POLICY QUALITY, ENVIRONMENT, HEALTH AND SAFETY

Rev. 1 - 08/06/2015

The A TLC management, addressing the general principles of ab medica holding S.p.A group, intends to operate for the sustainability and the achievement of the expectations of its customers and all stakeholders, recognizing as fundamental value the environment protection and people's health and safety.

According to this, A TLC is committed to implement and maintain an integrated Management System for Quality, Environment and Safety, based on the following key points:

1. LEGAL COMPLIANCE

Guarantee the compliance with laws, regulations, technical standards and other agreements applicable to corporate processes, products and services, with special reference to workers' health and safety, to environmental protection and other relevant aspects of social responsibility.

2. CONTINUAL IMPROVEMENT

Pursue the continual improvement of performances and the efficiency of processes related to the company management systems, according to the needs and expectations of all stakeholders, keeping an active system for planning the objectives, monitoring them and communicate the results.

3. PERSONNEL INVOLVEMENT AND DEVELOPMENT

Foster the satisfaction of the personnel through a continuous process of development, in terms of competence, training, information, awareness and active involvement, both in each specific operative field and in environment and safety topics.

4. CUSTOMER SATISFACTION

Focus everyone's effort on the Customer, understanding his needs and expectations, providing him with informative and technical support during all stages of the relationship, verifying at the end the achieved level of satisfaction.

5. TECHNOLOGICAL INNOVATION

Pursue the continuous innovation of products and processes, assuring the marketing of products characterized by a high quality and technological level, through the implementation of advanced test procedures, together with ecological excellence, including "design for environment" specifications in R&D procedures.

6. REDUCTION OF ENVIRONMENTAL IMPACTS AND POLLUTION PREVENTION

Reduce any environmental impact of products and activities, prevent the pollution, control the use of water, energy and natural resources, optimize the waste management and monitor fuel consumption and gas emissions due to products transportation.

7. REDUCTION OF RISKS AND SAFETY PREVENTION

Reduce any risk of injury, industrial accident and illness for workers, contractors and all stakeholders, with special reference to electrical safety, handling of loads, use of tools, plant systems maintenance, ergonomics and microclimate of workspaces.

8. SUPPLIERS INVOLVMENT

Establish the relationship with its suppliers on the basis of corporate social responsibility principles, selecting them according to quality and environmental, social and economic sustainability criteria, involving them effectively in the common commitment towards the excellence of products and services.
